SHOW HOURS

Wednesday	4 July 2018	9.00a.m. - 6.00p.m.
Thursday	5 July 2018	9.00a.m. - 6.00p.m.
Friday	6 July 2018	9.00a.m. - 6.00p.m.
Saturday	7 July 2018	9.00a.m. - 4.00p.m.

ADMISSION AND REGISTRATION

Admission is free. AWISA 2018 is a trade-only exhibition. All visitors are asked to register. Visitors can register at the counters in the foyer prior to admission, but it is preferred that they pre-register. Pre-registrations can only be made through the AWISA website, www.awisa.com/visitors.

ACCOMMODATION AND AFTER HOURS

There are over 50 hotels within two kilometres of the venue - in the Darling Harbour and Pyrmont area adjacent to ICC Sydney, and in the Sydney CBD. Special rates have been negotiated at a number of these hotels. Visitors are recommended to book early as this will give them a greater choice of room and hotel.

The Lido Group has been appointed to handle visitors' accommodation. To book visit www.awisa.com/hotels. For air travel contact your favourite airline or travel agent.

AIRPORT SHUTTLE BUSES

A fleet of 48 seat coaches will provide a complimentary shuttle service between the two domestic terminals and AWISA 2018, with the service running every half hour from 8.00am each show day, with the last service leaving the exhibition one hour after the close of the show each day.

On arrival at Sydney airport go to the baggage claim area in either domestic terminal and look for the bus company representative with the AWISA sign, or go to the Qantas group coach bays to the east of the Qantas terminal, T3. Qantas passengers should exit the Qantas terminal ground floor and turn left. Virgin, Jetstar and other T2 passengers

should exit the T2 terminal ground floor, walk along the pedestrian footpath through the ground floor of the car park to the Qantas terminal, then head right to the Qantas group coach bays. Look for the bus with the AWISA sign. International visitors can connect to the AWISA shuttle by taking the airport shuttle to the domestic terminals.

At the venue the passenger drop-off and pick-up point will be at the bus stop in Iron Wharf Place, north end of ICC Sydney Convention centre, near Sofitel Sydney Darling Harbour.

LUGGAGE ROOM

Luggage can be left during the day at the AWISA luggage room. Items are stored at the owners' risk.

CAR PARKING AND PUBLIC TRANSPORT

The venue car park is located underneath the exhibition halls, access off Darling Drive. For more details car park and public transport options visit: <https://www.iccsydney.com.au/visit-icc-sydney/getting-to-icc-sydney>

SAFETY AND CHILDREN

AWISA 2018 is a workplace with woodworking machinery on display and in operation. In the interest of safety, children over 6 months of age and under 15 years of age will not be admitted to the exhibition. AWISA prefers that children are not even brought to the venue. However, a professionally run children's hospitality suite is provided, with activities and entertainment to suit the various age groups being looked after. Space is available on a first-come first-served basis. Bookings are not accepted. By registering to visit, show visitors accept that the final decision about entry of children who appear to be under age will be made by the show managers.

AWISA 2018 IS ORGANISED BY THE AUSTRALIAN WOODWORKING INDUSTRY SUPPLIERS ASSOCIATION LIMITED.

SYDNEY

AWISA 
4-7 JULY 2018

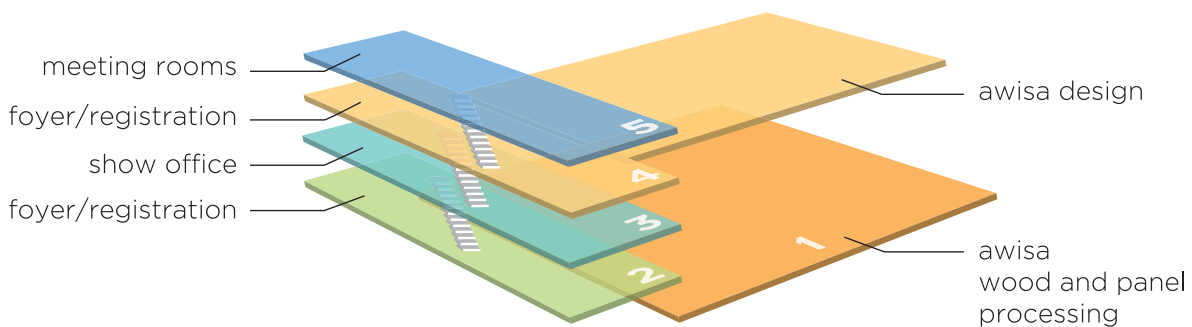

Sydney 2018 - the biggest AWISA exhibition ever presented

WELCOME to this AWISA 2018 exhibition preview magazine. This publication features just some of the products being displayed at AWISA 2018 by the 120 exhibiting companies.

The show occupies 28,000 square metres of space at Sydney's brand new multi-level ICC Sydney Exhibition Centre, built on the site of the biennial AWISA exhibitions that took place at Darling Harbour from 1992 to 2012. Far and away the biggest AWISA exhibition ever presented.

AWISA is the must-see event for everyone in woodworking and associated industries and professions. Furniture manufacturers, cabinet makers, kitchen manufacturers, joinery manufacturers, architects, designers, shop and office fitters, builders, and other wood, timber, panel, aluminium, plastic, stone and glass processing industries are welcome to attend.

HOLZHER EDGING TECHNOLOGY - PERFECT INVISIBLE JOINTS

For maximum productivity and superior finish, manufacturers cannot go past a Holzher Edgebander. The heart of any edgebander is the glue application system and Holzher offers the perfect solution for superior edge appearance. LTronic, the laser edging unit from Holzher is unequalled in terms of speed and cost efficiency or the GluJet application system for mass production use of PUR glue for water resistant applications. Regardless of which high performance system is chosen, optically invisible zero joints are a matter of course for Holzher.

MASTER SERIES STONE PROCESSING EQUIPMENT

The Master Series is the range of Intermac machining centres dedicated to stone processing. These technologies can machine sheets of natural materials, ceramics and synthetic materials used for floors, façades and cladding, furnishings, kitchen tops and funerary applications. Master processing centres are designed to offer optimum finish quality on sheets and blocks of natural and synthetic materials and ceramics, guaranteeing maximum reliability at all times.

DELIVERING EXCELLENT FINISH AND EDGE LIFE

The Harmony 2.0 tooling family by Ake delivers excellent finish and edge life by controlling the chip removal. The chip is guided past the subsequent tip meaning users are no longer pushing the chip from tip to tip resulting in brilliant edges and surfaces. This technology is available in applications including pre milling, routing, rebating and shaping, including 5 axis applications. For those wanting to ensure that their tooling keeps pace with the latest machinery technology, then Harmony 2.0 by Ake is the solution.

WEINIG POWERMAT 700 - THE NEW GENERATION OF MOULDING AND PLANING

With the introduction of the Powermat Series in 2004, Weing began a new era for planing and profiling. Now, with the Powermat 700 the next generation has arrived. The Powermat 700 is designed with a revolutionary new operating concept which no other moulder can offer. The result, easier operation and very short set up times thanks to wrench-free adjustments, standard with 40mm or 50mm spindles or the optional patented PowerLock tool clamping system. With these outstanding qualities the new Powermat is the perfect response to the market demands of today and sets a new standard for four-sided processing.

FULLY AUTOMATIC VERTICAL BOARD STORAGE

The Woodtron Cube is a fully automatic vertical board storage system that holds multiple packs of board and individually picks the required sheet as production is required. Paired with the brand new Woodtron Rapid Auto, one of the fastest machines on the market, Woodtron introduces the new way of innovative CNC machining with a cell. With less manual handling and downtime, the cell is an effective, highly efficient, streamlined process starting from the automatic loading of board through to the automatic unloading of panels.

DISTINCTIVE DECORATIVE DESIGNER PROFILES FOR HETTICH DRAWER SYSTEMS

Hettich's new designer profiles for ArciTech and InnoTech Atrira drawers provide a particularly effective way of individualising furniture. The decorative, self-adhesive designer profiles in attractive finishes create visual highlights with an individual touch: timeless stainless steel, chrome or aluminium looks. Oak and walnut pick up on the trend towards more natural authenticity. Easy to install, these profiles can also be added at a later date. The production process is in no way affected. Individual customer preferences can be met quickly and in a variety of ways.

THE NEW HOMAG MACHINE GENERATION

Since the end of March, Homag has a completely new image - with a new logo, a new look, and modern machine design.

In addition to the new design of Homag machines, the product names have also been more clearly structured for the customer. The new designations are easy to understand, consistent and traceable. From now on, the name of each machine clearly states its function. For example, visitors will find Homag edge banding machines under the name EDGETEQ, and machines from the saw technology range now all carry the name SAWTEQ. This means that it is much easier for customers and prospective customers to navigate around the world of Homag products.

Always a solution ahead

Homag explores new horizons to help customers reach their goals.

So that Homag can help customers on their journey to the digital future, they keep a step ahead of the market. This means that Homag offers not just the right high-tech machine, but also integrated solutions tailored precisely to customer needs. Whether traditional woodworking, batch size 1 or industrial series production, Homag helps achieve that all-important competitive edge. Because Homag understands woodworking operations inside out, the company can target exactly what it needed. For instance with tapio-ready machines, customised software or services from Homag's global service network. Hand in hand, Homag can shape tomorrow's trends and find precisely the solution that's needed to meet every challenge.

Design meets digital

Homag is giving a face to the digital future. The company is thrilled to be offering a very special highlight this year at AWISA, a new generation of machines. Under the banner of 'Design meets digital' Homag has redesigned all its machines to be more intuitive, more modern and more unique. What's more, they are now networked with the eco system tapio.

HC HOMAG

The progressive, totally function-oriented design turns machine operation into a special experience and highlights the innovative credentials of manufacturing clients.

AUSTRALIAN MADE SOFTWARE THAT SUITS THE AUSTRALIAN MARKET

CabMaster Software has a range of different software levels, offering a product that will suit specific requirements, from basic designs to full CNC manufacturing, including pricing and hardware reports.

CabMaster Software is a simple to use program with drag and drop features to draw plans, with photorealistic 3D renders and an integrated nesting package for CNC manufacturing. The company also has a highly trained support team consisting of both tradesmen and IT specialists, who can assist with any issues that may arise.

BECKER, THE VACUUM PUMP SPECIALIST

Becker has always been a leader in the vacuum hold-down sector of the woodworking industry. With its large 250m³/h and 500m³/h rotary vane vacuum pumps, Becker dominated the market with the Series 1 VTFL pumps, and strengthened its position with the release of the Series 2 VTFL pumps with all the major improvements to an already great pump series.

Whether a manufacturer needs a new or additional pump, or service or spares for an existing pump, Becker Pumps Australia is the CNC hold-down vacuum pump specialist.

EXCEPTIONAL FINISHES AND FEATURES

Since its commencement in 1980, Tesrol has been at the forefront of innovative design and custom finishes. The company's pride in workmanship, and unique concepts have seen its vacuum formed, polyurethane, PureGloss and Likewood range contribute to unprecedented success and national growth.

Boosted further by the inception of its brand new decorative board products, all featuring matching HPL-Infinite and Superclean Anti-fingerprint. Tesrol has evolved from a simple door manufacturer to being at the forefront of architectural and interior design finishes and joinery products.

AUSTRALIAN MADE MULTICAM TURNKEY CNC NESTING SOLUTIONS

Multicam Routing Systems will be showcasing the only Australian manufactured CNC router designed specifically for the woodworking industry. The Multicam SR series CNC router is a robust, high-powered workhorse that features fully automated material loading and unloading, automatic squaring, integrated dust extraction, automatic pop up location pins, multiple drill head, fully enclosed travelling automatic tool changer, barcode scanner, and KitchenCAD Pro software including optimisation.

This is a complete turnkey system that guarantees performance and reliability. Door manufacturers will appreciate the air-assisted constant depth

attachment that ensures that profiles are produced consistently and without depth errors on varying material thicknesses.

Other options available include horizontal boring attachments, saw head attachments, on gantry automatic labelling, and pre-sheet loading automatic labelling.

Multicam CNC routers are available in all popular sizes to suit any application and workplace, a number of which will be demonstrated on the Multicam stand during AWISA. Manufacturers that already own one of the many popular cabinet making software packages,

can easily integrate this with a Multicam router to create a complete nested based manufacturing solution.

Supported by factory trained technicians Australia wide, purchasers are assured of prompt and efficient support. Multicam Systems has been supplying its range of fully Australian made CNC routing machinery for over 30 years to cabinet makers, shop fitters and kitchen manufacturers.

THE COMPLETE HÄFELE - FURNITURE FITTINGS

Häfele is now proud to bring its valued partners its extensive collection of furniture fittings from around the world, gathered into the latest edition of The Complete Häfele - Furniture Fittings. In a follow-up to its earlier release of The Complete Häfele - Architectural Hardware, customers now have access to over 13,900 products available from Häfele Australia.

In addition to printed copies of the catalogues, the Häfele online experience has been expanded to keep up with the fast pace of every needs and requirements. Häfele knows that up to date information 24 hours a day is needed, that customers need live chat for immediate assistance, that they need to know the CAD details of that certain product and want to know what has been ordered in the past to speed up the ordering process. All this and more can be done with the ever-improving Häfele online platforms.

Häfele will continue to invest in product innovation and development to ensure customers are always up to date with world trends and the latest technology available.

To order a copy of the Furniture Fittings or Architectural Hardware catalogues visit www.hafele.com.au or find Häfele at stand 4511.

KESSEBOHMER CLEVER STORAGE - ANTHRACITE

Häfele is proudly partnered with Kesseböhmer to bring the very latest products in their range directly from Germany. Kesseböhmer is the master of clever storage, bringing better pantry solutions such as the well-loved Tandem pantry.

Häfele and Kesseböhmer are now able to bring all their favourite Clever Storage products in the all-new Anthracite colour range to bring bolder colour and shade choices to homes and kitchens. Anthracite pairs perfectly with all colour palettes to bring a subtle but rich dark finish. Taking inspiration from natural materials, the Kesseböhmer Anthracite range will bring a more sophisticated finish to the kitchen than a traditional black finish.

Find out more about Kesseböhmer at stand 4615.

MX DRAWER SYSTEMS

Häfele can now bring the MX drawer system to help make the most of space in a kitchen. MX drawers are engineered by Häfele to bring life to the kitchen through the smooth, elegant movements of the soft-close runners.

In addition to this there are several attractive side options from rails to glass inserts as well as many other high-end features to make drawers extraordinary. At stand 4511.

LOOX/SMART HÄFELE

Homes should be as intuitive as their owners; now, with the Smart Häfele range they can be. Across the entire Smart range Häfele has engineered bathroom mirrors, sound and lighting systems to give control of the home through smart phones using the Häfele Connect app.

The Loox multi-dimensional bathroom mirror has been designed to integrate seamlessly into life with four key functions

at the touch of a button. With front and back lighting, an integrated sound system and a mirror demister all controlled via the phone, what more could a home owner want?

As the home owner moves into the living room the Häfele Connect mobile app automatically connects to the sound system in the cabinetry and lighting around the room. This allows the home owner to change and adjust the lighting as well as keep playing music from the phone throughout the home.

Through a simple interface and with the touch of a button, a home can come to life in the hands of the owner. Visit Häfele's Smart Room display for more.

FREE FLAP FAMILY

Free Flap is a hingeless stay flap fitting for all of the most common cabinet heights and flap weight combinations. The Free Flap stay flap fitting is in touch with the latest trends with regard to compactness and design. The fittings impress with their ease of operation. During development, Häfele placed a considerable amount of importance on having a slimline and minimalist design in order to create more space in the cabinet, and having an attractive appearance as a result.

Thanks to the multi-position function, which can be perfectly adjusted using the force adjusting facility, Free Flap holds the flap in every position. The integrated finely-tuned soft closing system provides operating convenience. At stand 4511.

MORE POTENTIAL FOR OPERATING MACHINES

A lot of leeway in combining operating machines and in panel variety makes the STORETEQ S-500 an icon among storage systems. The stable design of this high-speed system permits large flexibility of the extension in length and width. Whether plastic, plexiglass, or laminates, coated or uncoated panels - the STORETEQ S-500 is a multi-talent in panel handling thanks to ST 71 suction traverse; and can manage panel weights up to 350 kg and panel length up to 5,600 mm. Watch and learn more about its massive range of features and watch it in action at the Homag stand.

HETTICH'S NEW GENERATION OF PUSH TO OPEN SILENT TECHNOLOGY

As a pioneer of push to open Silent technology, Hettich has added numerous new features to the second product generation. With push to open Silent, drawers are incredibly easy to open without handles, gently and quietly closing again from just a slight turn of the wrist. Instead of springing back, push to open Silent stores energy and assists the closing cycle as the drawer slowly glides in. With optional synchronisation, the system can be activated from the edges of large drawer. With optional 10 kg runners, light drawers can be closed just as easily as heavy weight drawers up to 80 kg.

FOR PROVEN QUALITY, IT HAS TO BE THE ORIGINAL

Quality is a fundamental and inherent purpose within Blum. To be the best that the company can be for all stakeholders that choose to partner with Blum. Blum is committed to maintaining and creating the highest standard of quality across everything that it does. Blum holds itself to not only industry standards but surpasses these to protect the true measurement of quality and trust that business partners show in the company by allowing Blum products and services into their businesses and homes.

Experience the difference of original Blum quality at the Blum stand.

SLIDELINE M 2-TRACK SYSTEM FOR GREATER FUNCTIONALLITY

SlideLine M's finely engineered components ensure fitted doors are silent, effortless to use and elegant, with narrow reveals and handle-less, flush-fitted front panels that match uncluttered interiors. The bottom running system offers the option of a one-track overlay or two-track inset profile suitable for wooden, glass or aluminium-framed doors weighing up to 30kg. Two doors can cross each other in just one profile. Runners can be pressed, screwed or glued to the fitted carcass. No special tools are required. Installation is simple since it's carried out from the front, not the sides.

CUSTOM PANEL CUTTING ON A GRAND SCALE

The award-winning SAWTEQ B-320 flexTec cutting cell revolutionises batch size 1 production using a robot. It enables the creation of highly flexible cutting patterns and the efficient processing of these patterns. It is systematically designed for batch size 1 production and works fully automatically with just one saw – the robot takes over all handling operations up to the ejection of the part from the cell. At AWISA, the SAWTEQ B-320 flexTec is fitted with the new, fully automatic part stacking on lifting tables or can be automatically conveyed to the next process island.

THE INGENIOUS PANEL SAW WITH DOUBLE TILT

The new kappa 590 is a benchmark for premium sliding table panel saws. The absolute highlight of the Format-4 innovation forge: The new double tilt circular saw unit. The double-sided tilt of 46 degrees each offers significant advantages when doing mitre cuts of frame parts with the visible side continuously on top as well as complex compound cuts and grooves in a mitre cuts. The overhead saw guard can be adjusted quickly and effortlessly for double-sided tilt or completely taken out of the work area.

The cutting height limit is eliminated in workshops: with a tilt area of a total of 92 degrees the 550 mm diameter saw blade achieves an impressive 202 mm cutting height at 90 degrees as well as 140.8 mm at 45 degrees and 118.7 mm cutting height at -45 degrees.

The highly efficient synchronous motor offers maximum torque with high efficiency. The motor with continuously adjustable speed control from 2,000 to 5,000 rpm guarantees constant high performance and best power transmission with state-of-the-art Poly-V-belt technology. Quick and easy selection of the optimum rotating and cutting speed via the machine control.

NEW GENERATION MINK MV CLAW VACUUM PUMPS

The new Mink MV generation offers all the advantages of previous models, but with even higher energy efficiency, lower noise levels and smaller dimensions. Proven mink claw characteristics such as dry and contact-free operation remain unaltered. No oil or other operating fluids are required in the compression chamber, making maintenance tasks such as oil and filter replacement unnecessary. Mink claw units are contact-free, so no component wear occurs and no replacement parts are required. Maintenance is confined to changing the gearbox oil every 20,000 operating hours.

PUREADY – PURE FLEXIBILITY IN EDGE-BANDING

The puReady nitrogen box provides flexibility in edgbanding with PUR adhesives. In the future users can stay relaxed during production breaks, colour or glue changes. With puReady, the PUR adhesive, stored in nitrogen, remains fresh and processable for a long time. This makes edgbanding flexible and cleaning the glue pots is no longer time-consuming and strenuous.

The puReady system delays reaction processes in the PUR adhesive and thus prolongs its processing time; facilitates and speeds up the cleaning process; increases flexibility in the use of different PUR colours and PUR adhesives; provides space for the storage of two glue pots; simple operation and clear control displays; mobile and space saving without power and compressed air connection; and compatible with all glue pots of the tempora edge banders F600/F800.

PERSONALISED AUTOMATION - MODERN FURNITURE PRODUCTION WITH HOLZHER COMBINING CNC AND SAWING TECHNOLOGY

The Dynestic 7532 gantry CNC machine expands the limits for nesting technology to new dimensions, and together with the Holzher pressure beam saw, Holzher unite precision engineering with intelligent software solutions for effective and precise panel cutting. Linked with the Holzher StoreMaster, Holzher can custom tailor a fully automated

solution to suit a company's needs. The Holzher StoreMaster provides state of the art robotics to increase profit and productivity. Fully integrated software provides a perfect overview of stock, remnants and panels already booked for processing. Reduce employee workload and increase material throughput. Mechanical precision and sophisticated

interfaces provide intelligent storage and loading solutions. Holzher has perfected the interplay of performance, quality and automation. Visit the Weinig Holzher stand to experience the difference.

FLEXSTORE FOR INCREASED PRODUCTIVITY AND REDUCED STORAGE COSTS

Flexstore EL, the automatic 3 axis storage system designed for medium to large industries. Optimising the handling of different panels, Flexstore can be integrated in production lines for nesting and/or sizing cells. Flexstore manages standardised or mixed panel stacks and allows easy tracking of panels inside the system.

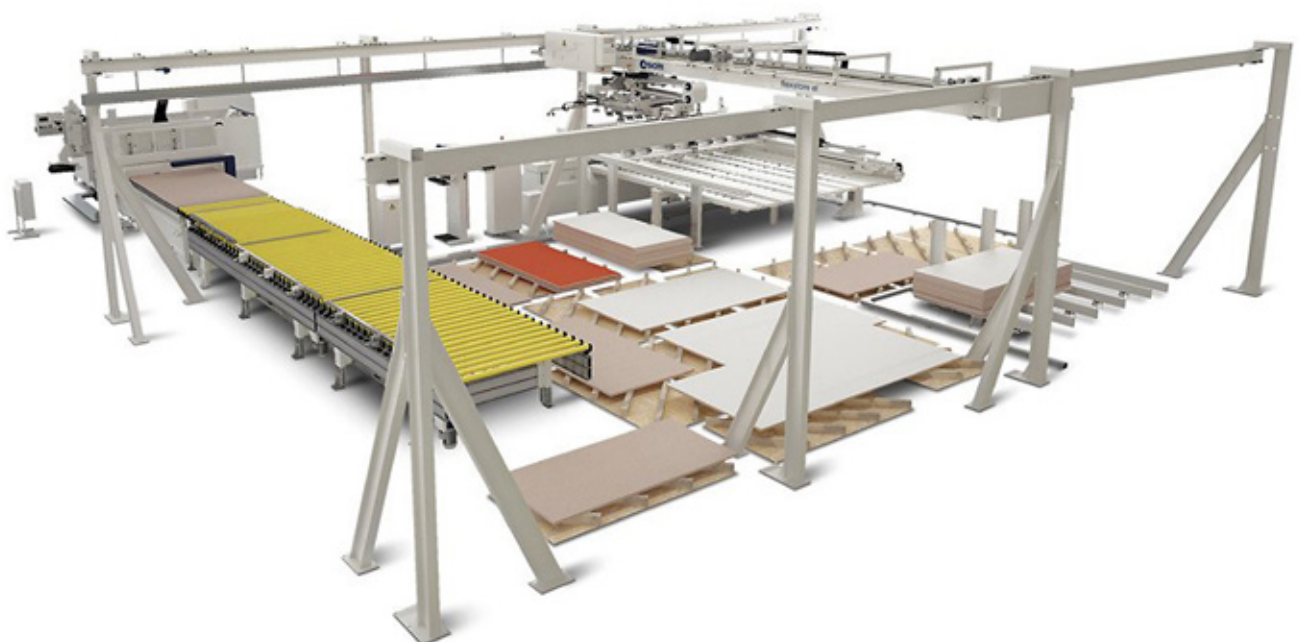

The Flexstore suction cup arm automatically adjusts to the various lengths and thicknesses of the panel

to be picked up and, moving both horizontally and vertically, can travel in the three main directions. It also has a pneumatic device for assisting in loading and unloading panels, and a device for detecting the weight - this ensures the system knows when a panel is in use by the cups.

The Flexstore system and design ensures the integrity of an inventory. The horizontal layout of the store prevents any possible damage from sliding. The store

uses a labelling system to guarantee full traceability and recognisability of every element. Flexstore provides an increase in productivity and reduction of storage management costs.

BEYOND TOOLS PRESENTS A RANGE OF SPECIALIST PRODUCTS

Rikon Australia

Combining strength and quality at economical prices, Rikon is dedicated to designing and manufacturing woodworking machinery of the highest quality.

Woodfast Machinery

Woodfast was born in Australia in 1941. Dedicated to designing and manufacturing high-quality woodworking machinery. Woodfast has built a reputation of excellence in educational institutions.

Redsail CNC laser and routers

Robust CNC laser and routing machinery, renowned in Australia for quality and affordability specifically designed for the educational market and boutique design shops.

Virutex woodworking machinery and tools

Spanish industrial quality woodworking equipment. In the Australian market for over 30 years with full support of spare parts, warranty service and professional advice. Renowned for niche market products.

Ribex thermoforming ovens and vacuum presses

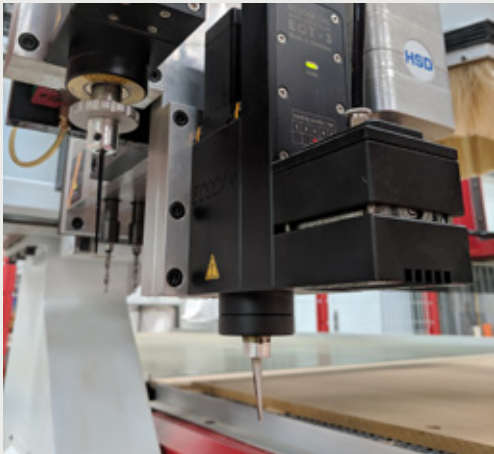

With decades of experience in vacuum press and thermoforming manufacturing. Ribex has been innovatively producing thermoforming solutions for solid surface and thermoplastics.

OBLIQUE, CIRCULAR, AND ELLIPTICAL CUTS WITH DONATONI JET 625

Jet 625 CNC helps make products with extremely precise dimensions. It offers high output due to the sliding of the axes X and Y that occur on recirculating linear bearing guides and racks with hardened and ground teeth, both with centralised grease lubrication.

The Jet 625 is a 5 interpolated axes CNC bridge mill, with Z axis stroke of 400mm, rotating blade head swivelling from -5 to +365 degrees and tilting from 0 to 90 degrees, to perform orthogonal cuts up to 200mm, ideal machine for performing oblique, circular and elliptical cuts, and almost all types of shaping and digging.
